

## Subject Index of Volume 228

### Al-citrate

The chemical speciation of aluminium in human serum 373

### Al-hydroxypyridinonates

Hydroxypyridinone complexes with aluminium. In vitro/vivo studies and perspectives 187

### Al(III)–citrate complexes

<sup>1</sup>H- and <sup>13</sup>C-NMR as tools to study aluminium coordination chemistry—aqueous Al(III)–citrate complexes 175

### Al(III)-complexes

Interactions of Al(III) with a neurofilament heptapeptide fragment: AcLysSerProValValGluGly 227

### Al(III) complexes

Speciation and structural aspects of interactions of Al(III) with small biomolecules 137

### Al-phosphate

The chemical speciation of aluminium in human serum 373

### Al-transferrin

The chemical speciation of aluminium in human serum 373

### Aluminium

Aluminium(III) as a promoter of cellular oxidation 271

Aluminium in tea—concentrations, speciation and bioavailability 385

Recent aspects of aluminium chemistry and biology: a survey 93

Review of binding methods and detection of Al(III) binding events in trypsin and DL-DPPC liposomes by a general thermodynamic model 343

The chemical speciation of aluminium in human serum 373

The reaction of aluminium with silicic acid in acidic solution: an important mechanism in controlling the biological availability of aluminium? 127

### Aluminium absorption

Aluminium speciation in relation to aluminium bioavailability, metabolism and toxicity 319

### Aluminium bioavailability

Aluminium speciation in relation to aluminium bioavailability, metabolism and toxicity 319

### Aluminium biospeciation

Speciation and structural aspects of interactions of Al(III) with small biomolecules 137

### Aluminium-citrate complexes

Slow dynamics of aluminium-citrate complexes studied by <sup>1</sup>H- and <sup>13</sup>C-NMR spectroscopy 163

### Aluminium complexes

Hydroxypyridinone complexes with aluminium. In vitro/vivo studies and perspectives 187

### Aluminium coordination

<sup>1</sup>H- and <sup>13</sup>C-NMR as tools to study aluminium coordination chemistry—aqueous Al(III)–citrate complexes 175

### Aluminium excretion

Aluminium speciation in relation to aluminium bioavailability, metabolism and toxicity 319

### Aluminium–ligand interactions

Aluminium speciation in relation to aluminium bioavailability, metabolism and toxicity 319

### Aluminium speciation

Aluminium speciation in relation to aluminium bioavailability, metabolism and toxicity 319

### Aluminium toxicity

Aluminium speciation in relation to aluminium bioavailability, metabolism and toxicity 319

### Aluminum

A comparative study of aluminum(III), gallium(III), indium(III), and thallium(III) binding to human serum transferrin 237

Aluminum chelation principles and recent advances 97

Effects of Al(III) speciation on cell membranes and molecular models 285

Spectroscopic approaches to the study of the interaction of aluminum with humic substances 205

### Aluminum association

Interactions of aluminum(III) with the biologically relevant ligand D-ribose 153

### Aluminum-carboxylates

Synthetic and structural carboxylate chemistry of neurotoxic aluminum in relevance to human diseases 297

### Aluminum complexation

Interactions of aluminum(III) with the biologically relevant ligand D-ribose 153

### Aluminum interactions

Interactions of aluminum(III) with the biologically relevant ligand D-ribose 153

### Aluminum ions

Aluminum modulation of proteolytic activities 263

### Aluminum modulation

Aluminum modulation of proteolytic activities 263

### Alzheimer's disease

Aluminium(III) as a promoter of cellular oxidation 271

### Antioxidative enzyme

Aluminium(III) as a promoter of cellular oxidation 271

### Binding site

Review of binding methods and detection of Al(III) binding events in trypsin and DL-DPPC liposomes by a general thermodynamic model 343

### Bioavailability

Aluminium in tea—concentrations, speciation and bioavailability 385

Synthetic and structural carboxylate chemistry of neurotoxic aluminum in relevance to human diseases 297

### Chelators

Aluminum chelation principles and recent advances 97

Hydroxypyridinone complexes with aluminium. In vitro/vivo studies and perspectives 187

- Computer simulation models  
Aluminium speciation in relation to aluminium bioavailability, metabolism and toxicity 319
- Crystal structures  
Synthetic and structural carboxylate chemistry of neurotoxic aluminum in relevance to human diseases 297
- Desferrioxamine  
Aluminum chelation principles and recent advances 97
- Disease  
Synthetic and structural carboxylate chemistry of neurotoxic aluminum in relevance to human diseases 297
- Electrospray ionisation MS–MS  
The chemical speciation of aluminium in human serum 373
- ETAAS  
The chemical speciation of aluminium in human serum 373
- Fe(III) analogues  
Synthesis, structures and properties of hydrolytic Al(III) aggregates and Fe(III) analogues formed with iminodiacetate-based chelating ligands 115
- Formation constants  
Spectroscopic approaches to the study of the interaction of aluminum with humic substances 205
- Free radicals  
Aluminium(III) as a promoter of cellular oxidation 271
- Fulvic acid  
Spectroscopic approaches to the study of the interaction of aluminum with humic substances 205
- Gallium  
A comparative study of aluminum(III), gallium(III), indium(III), and thallium(III) binding to human serum transferrin 237
- $^1\text{H}$ - and  $^{13}\text{C}$ -NMR spectroscopy  
Slow dynamics of aluminium-citrate complexes studied by  $^1\text{H}$ - and  $^{13}\text{C}$ -NMR spectroscopy 163
- Human serum of healthy volunteers and of dialysis patients  
The chemical speciation of aluminium in human serum 373
- Humic substances  
Spectroscopic approaches to the study of the interaction of aluminum with humic substances 205
- Hydrolytic Al(III) aggregates  
Synthesis, structures and properties of hydrolytic Al(III) aggregates and Fe(III) analogues formed with iminodiacetate-based chelating ligands 115
- Hydroxyaluminosilicate  
The reaction of aluminium with silicic acid in acidic solution: an important mechanism in controlling the biological availability of aluminium? 127
- Hydroxypyridinone  
Aluminum chelation principles and recent advances 97
- Hydroxypyridinones  
Hydroxypyridinone complexes with aluminium. In vitro/vivo studies and perspectives 187
- ICP-MS  
The chemical speciation of aluminium in human serum 373
- Iminodiacetate-based chelating ligands  
Synthesis, structures and properties of hydrolytic Al(III) aggregates and Fe(III) analogues formed with iminodiacetate-based chelating ligands 115
- Indium  
A comparative study of aluminum(III), gallium(III), indium(III), and thallium(III) binding to human serum transferrin 237
- Ion channel  
Effects of Al(III) speciation on cell membranes and molecular models 285
- Ligand exchange  
Slow dynamics of aluminium-citrate complexes studied by  $^1\text{H}$ - and  $^{13}\text{C}$ -NMR spectroscopy 163
- Ligand–receptor interactions  
Review of binding methods and detection of Al(III) binding events in trypsin and DL-DPPC liposomes by a general thermodynamic model 343
- Lipid peroxidation  
Aluminium(III) as a promoter of cellular oxidation 271
- Liposomes  
Review of binding methods and detection of Al(III) binding events in trypsin and DL-DPPC liposomes by a general thermodynamic model 343
- Liquid chromatography  
The chemical speciation of aluminium in human serum 373
- Low molecular mass biomolecules  
Speciation and structural aspects of interactions of Al(III) with small biomolecules 137
- Maltolate  
Aluminium in tea—concentrations, speciation and bioavailability 385
- Membrane  
Effects of Al(III) speciation on cell membranes and molecular models 285
- Metal ions  
Aluminium(III) as a promoter of cellular oxidation 271
- Molecular dynamics calculations  
Interactions of Al(III) with a neurofilament heptapeptide fragment: AcLysSerProValValGluGly 227
- Multi-nuclear complexes  
Recent aspects of aluminium chemistry and biology: a survey 93
- Neurodegeneration  
Aluminium(III) as a promoter of cellular oxidation 271
- (Neuro)toxicity  
Synthetic and structural carboxylate chemistry of neurotoxic aluminum in relevance to human diseases 297
- NMR  
Interactions of Al(III) with a neurofilament heptapeptide fragment: AcLysSerProValValGluGly 227
- NMR spectroscopy  
 $^1\text{H}$ - and  $^{13}\text{C}$ -NMR as tools to study aluminium coordination chemistry—aqueous Al(III)–citrate complexes 175
- Nuclear magnetic resonance  
A comparative study of aluminum(III), gallium(III), indium(III), and thallium(III) binding to human serum transferrin 237
- Oxalate  
Aluminium in tea—concentrations, speciation and bioavailability 385
- Phospholipid bilayer  
Effects of Al(III) speciation on cell membranes and molecular models 285
- Plasma membrane  
Aluminium(III) as a promoter of cellular oxidation 271
- Polyphenols  
Aluminium in tea—concentrations, speciation and bioavailability 385
- Proteolytic activities  
Aluminum modulation of proteolytic activities 263

- D-Ribose association  
Interactions of aluminum(III) with the biologically relevant ligand D-ribose 153
- D-Ribose complexation  
Interactions of aluminum(III) with the biologically relevant ligand D-ribose 153
- Silicic acid  
The reaction of aluminium with silicic acid in acidic solution: an important mechanism in controlling the biological availability of aluminium? 127
- Solution structure  
 $^1\text{H}$ - and  $^{13}\text{C}$ -NMR as tools to study aluminium coordination chemistry—aqueous Al(III)–citrate complexes 175
- Speciation  
Aluminium in tea—concentrations, speciation and bioavailability 385  
Interactions of Al(III) with a neurofilament heptapeptide fragment: AcLysSerProValValGluGly 227  
Synthetic and structural carboxylate chemistry of neurotoxic aluminum in relevance to human diseases 297  
The chemical speciation of aluminium in human serum 373
- Stability constant  
Recent aspects of aluminium chemistry and biology: a survey 93
- Tea  
Aluminium in tea—concentrations, speciation and bioavailability 385
- Ternary Al-citrate–phosphate complex  
The chemical speciation of aluminium in human serum 373
- Thallium  
A comparative study of aluminum(III), gallium(III), indium(III), and thallium(III) binding to human serum transferrin 237
- Transferrin  
A comparative study of aluminum(III), gallium(III), indium(III), and thallium(III) binding to human serum transferrin 237
- Trypsin  
Review of binding methods and detection of Al(III) binding events in trypsin and DL-DPPC liposomes by a general thermodynamic model 343
- Ultramicrofiltration  
The chemical speciation of aluminium in human serum 373
- Urinary excretion  
Aluminium in tea—concentrations, speciation and bioavailability 385
