

Subject Index of Volumes 233–234

Absorption spectroscopy

- Coupling between normal coordinates in the ground and excited states of coordination compounds. Electronic spectroscopy and theoretical models 63

Addition reactions

- Cone angles: Tolman's and Plato's 41

Ambidentate ligands

- Coordination complexes of bis(amido)cyclodiphosph(III/V and V/ V)azane imides and chalcogenides 237

Antimonides

- Chains, planes, and antimonides 207

Cadmium thiolate

- Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319

Calix[4]arene compounds

- Wide-rim and outer-face functionalizations of calix[4]arene 289

Catalases

- Oxidations of iron(II)/(III) by hydrogen peroxide: from aquo to enzyme 311

Catalysis

- Group 10 metal indenyl complexes 157

Chalcogens

- Coordination complexes of bis(amido)cyclodiphosph(III/V and V/ V)azane imides and chalcogenides 237

Chromium

- Monomers, oligomers and polymers containing arenes with pendent transition metal moieties 177

Cone conformation

- Wide-rim and outer-face functionalizations of calix[4]arene 289

Coordination compounds

- Coordination complexes of bis(amido)cyclodiphosph(III/V and V/ V)azane imides and chalcogenides 237

Copper thiolate

- Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319

Cyclodiphosph(III/V)azane

- Coordination complexes of bis(amido)cyclodiphosph(III/V and V/ V)azane imides and chalcogenides 237

Cyclodiphosph(V/V)azane

- Coordination complexes of bis(amido)cyclodiphosph(III/V and V/ V)azane imides and chalcogenides 237

Dendritic polymers

- Designing dendritic polymers containing phosphorus donor ligands and their corresponding transition metal complexes 223

Deviant cone angles

- Cone angles: Tolman's and Plato's 41

Dynamics

- Sterically hindered organometallics: multi-*n*-rotor (*n* = 5, 6 and 7) molecular propellers and the search for correlated rotations 75

Electronic effects

- Cone angles: Tolman's and Plato's 41

Electrospray ionization mass spectrometry (ESI–MS)

- Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319

Fenton chemistry

- Oxidations of iron(II)/(III) by hydrogen peroxide: from aquo to enzyme 311

Fluorine

- The chemistry of krypton 1

Fluxionality

- Sterically hindered organometallics: multi-*n*-rotor (*n* = 5, 6 and 7) molecular propellers and the search for correlated rotations 75

Gif chemistry

- Oxidations of iron(II)/(III) by hydrogen peroxide: from aquo to enzyme 311

Group transfer reactions

- Cone angles: Tolman's and Plato's 41

Haber–Weiss reaction

- Oxidations of iron(II)/(III) by hydrogen peroxide: from aquo to enzyme 311

Hapticity

- Group 10 metal indenyl complexes 157

Hetero-clathrochelate

- Synthesis, characterization and reactivity of some macrobicyclic and macrotricyclic hetero-clathrochelate complexes 255

High-oxidation states

- The chemistry of krypton 1

Hypervalence

- The octet rule and hypervalence: two misunderstood concepts 53

Imidometaphosphates

- Coordination complexes of bis(amido)cyclodiphosph(III/V and V/ V)azane imides and chalcogenides 237

Indenyl

- Group 10 metal indenyl complexes 157

Indenyl effect

- Group 10 metal indenyl complexes 157

Iron

- Monomers, oligomers and polymers containing arenes with pendent transition metal moieties 177

Iron dioxime

- Iron complexes of borylated vicinal dioxime macrocycles 273

Kinetics

- Iron complexes of borylated vicinal dioxime macrocycles 273
- Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319

Krypton

- The chemistry of krypton 1

Krypton compounds

- The chemistry of krypton 1

- Lanthanum
Non-cyclopentadienyl ancillaries in organogroup 3 metal chemistry: a fine balance in ligand design 131
- Lewis structures
The octet rule and hypervalence: two misunderstood concepts 53
- Ligand design
Non-cyclopentadienyl ancillaries in organogroup 3 metal chemistry: a fine balance in ligand design 131
- Luminescence
Luminescent molecular sensors based on analyte coordination to transition-metal complexes 341
- Luminescence spectroscopy
Coupling between normal coordinates in the ground and excited states of coordination compounds. Electronic spectroscopy and theoretical models 63
- Macrobicyclic
Synthesis, characterization and reactivity of some macrobicyclic and macrotricyclic hetero-clathrochelate complexes 255
- Manganese
Monomers, oligomers and polymers containing arenes with pendent transition metal moieties 177
- Metal-binding protein
Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319
- Metal hydride complexes
Early transition metal hydride complexes: synthesis and reactivity 107
- Metallothionein (MT)
Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319
- Molecular dynamics
Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319
- Molecular gear
Sterically hindered organometallics: multi- n -rotor ($n = 5, 6$ and 7) molecular propellers and the search for correlated rotations 75
- Molecular modeling
Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319
- Molecular propeller
Sterically hindered organometallics: multi- n -rotor ($n = 5, 6$ and 7) molecular propellers and the search for correlated rotations 75
- Molybdenum
Monomers, oligomers and polymers containing arenes with pendent transition metal moieties 177
- Monomers
Monomers, oligomers and polymers containing arenes with pendent transition metal moieties 177
- Noble-gas chemistry
The chemistry of krypton 1
- Nonbonded effects
Iron complexes of borylated vicinal dioxime macrocycles 273
- Nucleophilic aromatic substitution
Monomers, oligomers and polymers containing arenes with pendent transition metal moieties 177
- Octet rule
The octet rule and hypervalence: two misunderstood concepts 53
- Organometallic chemistry
Non-cyclopentadienyl ancillaries in organogroup 3 metal chemistry: a fine balance in ligand design 131
- Oxidative fluorinators
The chemistry of krypton 1
- Oxo ligation
Iron complexes of borylated vicinal dioxime macrocycles 273
- P-donor ligands
Cone angles: Tolman's and Plato's 41
- Peroxidases
Oxidations of iron(II)/(III) by hydrogen peroxide: from aquo to enzyme 311
- Phosphorus donor ligands
Designing dendritic polymers containing phosphorus donor ligands and their corresponding transition metal complexes 223
- Photodynamic therapy
Photosensitized singlet oxygen and its applications 351
- Photosensitizers
Photosensitized singlet oxygen and its applications 351
- Pnictides
Chains, planes, and antimonides 207
- Polymers
Monomers, oligomers and polymers containing arenes with pendent transition metal moieties 177
- Potential energy surfaces
Coupling between normal coordinates in the ground and excited states of coordination compounds. Electronic spectroscopy and theoretical models 63
- Protein folding
Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319
- Rare-earth
Chains, planes, and antimonides 207
- Reactivity
Early transition metal hydride complexes: synthesis and reactivity 107
Synthesis, characterization and reactivity of some macrobicyclic and macrotricyclic hetero-clathrochelate complexes 255
- Recombinant protein
Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319
- Restricted rotation
Sterically hindered organometallics: multi- n -rotor ($n = 5, 6$ and 7) molecular propellers and the search for correlated rotations 75
- Ruthenium
Monomers, oligomers and polymers containing arenes with pendent transition metal moieties 177
- Scandium
Non-cyclopentadienyl ancillaries in organogroup 3 metal chemistry: a fine balance in ligand design 131
- Scanning tunnelling microscopy (STM)
Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319
- Sensors
Luminescent molecular sensors based on analyte coordination to transition-metal complexes 341
- Singlet oxygen
Photosensitized singlet oxygen and its applications 351
- Spectroscopy
Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319
- Steric effects
Cone angles: Tolman's and Plato's 41

- Structural chemistry
Chains, planes, and antimonides 207
- Substitution reactions
Cone angles: Tolman's and Plato's 41
- Synthesis
Early transition metal hydride complexes: synthesis and reactivity 107
- Time-dependent theory of spectroscopy
Coupling between normal coordinates in the ground and excited states of coordination compounds. Electronic spectroscopy and theoretical models 63
- Transition metal
Sterically hindered organometallics: multi- n -rotor ($n = 5, 6$ and 7) molecular propellers and the search for correlated rotations 75
- Transition metal-complexed arenes
Monomers, oligomers and polymers containing arenes with pendent transition metal moieties 177
- Transition metal complexes
Designing dendritic polymers containing phosphorus donor ligands and their corresponding transition metal complexes 223
- Vibronic structure
Coupling between normal coordinates in the ground and excited states of coordination compounds. Electronic spectroscopy and theoretical models 63
- Wide-rim and outer-face functionalizations
Wide-rim and outer-face functionalizations of calix[4]arene 289
- Yttrium
Non-cyclopentadienyl ancillaries in organogroup 3 metal chemistry: a fine balance in ligand design 131
- Zinc thiolate
Studies of metal binding reactions in metallothioneins by spectroscopic, molecular biology, and molecular modeling techniques 319
