

Subject Index of Volume 244

Ab initio quantum chemical calculations

- Polynitrogen compounds: 1. Structure and stability of N₄ and N₅ systems 93

Alkali metals

- Binary and ternary carbides of alkali and alkaline-earth metals 115

Alkaline-earth metals

- Binary and ternary carbides of alkali and alkaline-earth metals 115

Borate

- The coordination chemistry of boryl and borate substituted cyclopentadienyl ligands 71

Boron

- The coordination chemistry of boryl and borate substituted cyclopentadienyl ligands 71

Boryl

- The coordination chemistry of boryl and borate substituted cyclopentadienyl ligands 71

Calixarenes

- Coordination chemistry of the larger calixarenes 45

Carbides

- Binary and ternary carbides of alkali and alkaline-earth metals 115

Complexes

- Coordination chemistry of the larger calixarenes 45

π -Conjugated polymers

- Linear organic π -conjugated systems featuring the heavy Group 14 and 15 elements 1

Crystal structures

- Binary and ternary carbides of alkali and alkaline-earth metals 115

Cyclodisilazanes

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Cyclodisiloxanes

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Cyclodisilthianes

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Cyclopentadienyl

- The coordination chemistry of boryl and borate substituted cyclopentadienyl ligands 71

2+2 Cycloreversion

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Electronic structure

- Linear organic π -conjugated systems featuring the heavy Group 14 and 15 elements 1

Elsevier B.V.

doi:10.1016/S0010-8545(03)00169-3

Four-membered heterocyclic compounds

- Four-membered heterocyclic compounds containing high coordinate group 16 elements 137

Heteroelements

- Linear organic π -conjugated systems featuring the heavy Group 14 and 15 elements 1

High coordinate compounds

- Four-membered heterocyclic compounds containing high coordinate group 16 elements 137

High coordinate 1,2-oxachalcogenetanes

- Four-membered heterocyclic compounds containing high coordinate group 16 elements 137

High energy density materials

- Polynitrogen compounds: 1. Structure and stability of N₄ and N₅ systems 93

Hypervalent compounds

- Four-membered heterocyclic compounds containing high coordinate group 16 elements 137

Lewis acid

- The coordination chemistry of boryl and borate substituted cyclopentadienyl ligands 71

Metallocene

- The coordination chemistry of boryl and borate substituted cyclopentadienyl ligands 71

Metalloles

- Linear organic π -conjugated systems featuring the heavy Group 14 and 15 elements 1

Oxirane formation reaction

- Four-membered heterocyclic compounds containing high coordinate group 16 elements 137

Pentanitrogen

- Polynitrogen compounds: 1. Structure and stability of N₄ and N₅ systems 93

Phosphasilenes

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Physical properties

- Binary and ternary carbides of alkali and alkaline-earth metals 115

Polynitrogen compounds

- Polynitrogen compounds: 1. Structure and stability of N₄ and N₅ systems 93

1,2-Selenazetidines

- Four-membered heterocyclic compounds containing high coordinate group 16 elements 137

Silaazacyclobutanes

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Silacyclobutanes

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Silanimines

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Silanones

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Silanthiones

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Silaoxacyclobutanes

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Silaphosphacyclobutanes

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Silathiacyclobutanes

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–

Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Silenes

- Hetero- π -systems from 2+2 cycloreversions. Part 1. Gusel'nikov–Flowers route to silenes and origination of the chemistry of doubly bonded silicon 149

Stability

- Polynitrogen compounds: 1. Structure and stability of N_4 and N_5 systems 93

Structures

- Coordination chemistry of the larger calixarenes 45
- Polynitrogen compounds: 1. Structure and stability of N_4 and N_5 systems 93

Synthesis

- Binary and ternary carbides of alkali and alkaline-earth metals 115
- Coordination chemistry of the larger calixarenes 45

Tetranitrogen

- Polynitrogen compounds: 1. Structure and stability of N_4 and N_5 systems 93

Thermolysis

- Four-membered heterocyclic compounds containing high coordinate group 16 elements 137

X-ray crystallographic analysis

- Four-membered heterocyclic compounds containing high coordinate group 16 elements 137
