Preface

Frontiers of organometallic chemistry: 2010

In 2000 we initiated a series of biennial special issues of *Coordination Chemistry Reviews* containing short review articles on aspects of both main group and transition metal organometallic chemistry of current interest. The current special issue is the sixth of this series; the previous such special issues appeared in 2000, 2002, 2004, 2006, and 2008. This issue contains 10 articles, which cover a broad spectrum of organometallic topics including areas of fundamental physical and synthetic organometallic chemistry as well as diverse applications of organometallic chemistry. We hope that the readers of these articles will gain insight as to

recent developments in some of the currently important areas of organometallic chemistry as well as some ideas for new research programs.
