## Letter from the Editor

Dear Readers:

Welcome to another year of the Journal! The list of papers already accepted spans a wide view of analytical measurement science!

Our theme issue on chemometrics is now in print, and I can remember more than 6 years ago, when it was just an idea. Such issues, where a single subject area is the focus of the papers, are a great deal of work to bring to reality. It is comparable to writing a book with 10 authors in many ways. Nevertheless, the Journal is open to suggestions for such focused area review issues. Feel free to suggest areas that are just beginning to break loose in analytical chemistry as well as current views in more established areas. Ionic liquids were a little-known area in chemistry a few years back but the Journal has had one article already and another is in the queue for appearance this year. I would enjoy seeing articles on the challenges presented by molecules attached to or entrained in nanostructural materials, on prediction of most likely conditions for enantiomer resolution on analytical and larger scale, and even chemometric applications in a particular area of measurement.

It is not too late to wish you a happy, prosperous and productive New Year!

**C. H. Lochmüller**

**Editor-in-Chief**
