Letter from the Editor

Dear Readers:

It has been another interesting year as Editor and I want to thank the authors and the readership for making it so. When I first became Editor-in-Chief of this Journal, I promised that the articles would review not only important work of the past decades but of the last few years or even the last year and that challenging position by authors would be considered as well. I promised to consider “theme issues” and even mentioned chemometrics as an example. It took almost a decade to cover that topic but we did. This year some new areas began to appear and we were honored to host the celebration of the anniversary of the Nobel Prize for the discovery of polarography.

I would like to see more reviews in areas such as forensics where analytical measurement science is often coupled with the work of forensic pathologists. I am still hoping for reviews of the current state of measurements in the field of nanotechnology which includes not just material science but drug delivery and diagnostics.

Please feel free to write and suggest topics that you would like to see or write about. An important review need not be in an area already seen as widely applicable. Some of the best stimulate applications are in areas that have not been thought of previously.

C. H. Lochmüller
Editor-in-Chief
