

Letter to the Editor

Dear Sir,

The results of two recent papers published in *Dyes and Pigments* impelled us to write to point out errors in three structures in our paper, Freeman *et al.*, An approach to the design of non-mutagenic azo dyes. 1: The identification of non-mutagenic precursors and potential metabolites, *Dyes and Pigments*, 8(6), 417, 1987. The errors are in the assignment of structures **51**, **52** and **55** on page 427. The correct structures should show the arylazo group *ortho* to the hydroxyl group.
