

Editorial

This issue of *Dyes and Pigments* introduces the appointment of Professor Harold Freeman as co-Editor of the Journal. Professor Freeman will need little introduction to dye chemists worldwide. He is currently CIBA-GEIGY Professor of Dyestuff Chemistry at North Carolina State University, USA. Journal readers will be aware of his extensive publications on a wide range of research topics pertinent to current developments in colourant chemistry.

Professor Freeman and myself will act as co-Editors of the Journal for the immediate future, and authors may submit scripts either through their appropriate Editorial Board member, or to either of the co-Editors.

This is an appropriate time to advise prospective authors that, in addition to colourant synthesis/property papers, colourant application papers will be considered, together with papers concerned with computer-aided design studies, environmental aspects of colourants and colourants for potential application in medicine and related fields. Review papers are also now welcomed, provided that an outline scheme has been approved by one of the co-Editors.

I would thank all Journal subscribers and contributors for their past support for the Journal; both myself and Professor Freeman look forward to the continued development of the Journal.

Arnold T. Peters
