### **Histological Typing of Odontogenic Tumours**

I.R.H. Kramer, J.J. Pindborg and M. Shear, 1992. 2nd Ed. Berlin, Springer.

TWENTY-ONE years after the first edition of Professor Kramer's excellent monograph appears the second, new and improved edition. In a mere 118 pages, Professors Kramer, Pindborg and Shear take the reader with great precision through the often difficult field of odontogenic tumours. Clear colour and monochrome illustrations with a concise, un-referenced but authoritative text, offer a thorough exposition which is to be commended.

This excellent monograph must have a place in the office of all those with an interest in oral pathology. A set of corresponding slides is also available.
