EWS-FLI1 fusion transcripts identified in patients with typical neuroblastoma—This paper by Burchill *et al.* was published in the *European Journal of Cancer*, Vol. 33, No. 2, pp. 239–243, 1997. This paper describes the identification of EWS-FLI1 fusion transcripts in two typical neuroblastomas. The fusion transcript identified in patient 1 was a typical type 1 EWS-FLI1 product as stated in the text. However, the analysis of the fusion transcript from patient 2 is incorrect.

The 376bp product identified in patient 2 is a typical EWS-FLI1 type 2 fusion product. The 66bp identified between EWS exon 7 and FLI1 on exon 6, corresponds to FLI1 exon 5. The authors also wish to clarify the human ERGB transcription factor is identical to FLI1, located on chromosome 11q.
