COVER PICTURE

The cover picture shows the X-ray structure of [Pd(Et_2timdt)-Br_2] (left; Et_2timdt = diethylimidazolidine-2,4,5-trithione), obtained by treating the symmetrically substituted dithiolene [Pd(Et_2timdt)$_2$] with Br_2 or IBr. This complex has been exploited as a starting material for the synthesis of the new mixed-ligand, push-pull dithiolene [Pd(Et_2timdt)(mnt)] (mnt = maleonitriledithiolate), whose X-ray molecular structure is depicted on the right. Details are discussed in the Short Communication by M. Arca et al. on p. 1291 ff.
