COVER PICTURE

The cover picture shows symbolically the activation of an N₂ molecule by igniting a plasma discharge in nitrogen gas. The crystal structure of a new tantalum nitride obtained by the plasma-enhanced CVD method is seen in the background. Details are discussed in the article by G. V. Vajenine et al. on p. 3233 ff. We thank the Alexander von Humboldt Foundation for support through a Sofia Kovalevskaja Research Award.

MICROREVIEW

Contents

3201 R. Leino,* P. Lehmus, A. Lehtonen

Heteroatom-Substituted Group 4 Bis(indenyl)-metallocenes

Keywords: Indene / Metallocenes / Zirconium / Olefin
 polymerization
