Inorganic Chemistry

Cover Picture / Microreview

Alexander V. Zabula and F. Ekkehardt Hahn

Benzannulated N-Heterocyclic Germynes, Stannylenes and Plumbylenes

A union formed by chemical societies in Europe (ChemPubSoc Europe) has taken the significant step into the future by merging their traditional journals, to form two leading chemistry journals, the *European Journal of Inorganic Chemistry* and the *European Journal of Organic Chemistry*. Three further members of ChemPubSoc Europe (Austria, Czech Republic and Sweden) are Associates of the two journals.

COVER PICTURE

The cover picture shows some selected examples of benzannulated germynes, stannynes and plumbylenes and their aggregation behaviour. In addition, some complexes of bidentate bis(germylenes) and bis(stannynes) are depicted, demonstrating the versatile coordination chemistry of these ligands with transition and main group metals. Details are presented in the Microreview by A. V. Zabula and F. E. Hahn on p. 5165ff.
