Keyword index

05.20.Dd – Gas separation by means of the Knudsen compressor, 155
05.40.-a – The turbulent flow between two rotating stirrers: similarity laws and transitions for the driving torques fluctuations, 258
3-D microparticle transport simulations – Simulation of airflow fields and microparticle deposition in realistic human lung airway models. Part II: Particle transport and deposition, 650
47.15.Cb – Optimal disturbances in suction boundary layers, 330
47.15.Fe – Optimal disturbances in suction boundary layers, 330
47.20.Ft – Optimal disturbances in suction boundary layers, 330
47.20.Qr – Spherical Couette flow in a dipolar magnetic field, 729
47.27.-i – The turbulent flow between two rotating stirrers: similarity laws and transitions for the driving torques fluctuations, 258
47.45.-n – Gas separation by means of the Knudsen compressor, 155
47.65.-d – Spherical Couette flow in a dipolar magnetic field, 729
47.70.Nd – Gas separation by means of the Knudsen compressor, 155
51.10.+y – Gas separation by means of the Knudsen compressor, 155
53Z05 – Vorticity and curvature at a stream surface, 473
76A02 – Vorticity and curvature at a stream surface, 473

A

AAA morphologies – A comparison between different asymmetric abdominal aortic aneurysm morphologies employing computational fluid–structure interaction analysis, 615
Abdominal aortic aneurysms – A comparison between different asymmetric abdominal aortic aneurysm morphologies employing computational fluid–structure interaction analysis, 615
Absolute instability – The absolute instability of the boundary layer on a rotating cone, 344
Adverse-pressure-gradient boundary layers – Testing of Reynolds-stress-transport closures by comparison with DNS of an idealized adverse-pressure-gradient boundary layer, 551
Air bubble entrainment – Bubbly flow structure in hydraulic jump, 367
Algebraic growth – Optimal disturbances in suction boundary layers, 330
Asymmetric upper airways – Simulation of airflow fields and microparticle deposition in realistic human lung airway models. Part I: Airflow patterns, 632 – Simulation of airflow fields and microparticle deposition in realistic human lung airway models. Part II: Particle transport and deposition, 650
Asymptotic analysis – Derivation of a new two-dimensional viscous shallow water model with varying topography, bottom friction and capillary effects, 49

B

BGK model – On the numerical solution of a BGK-type model for chemical reactions, 455
Binary mixture – Half-space problem of the nonlinear Boltzmann equation for weak evaporation and condensation of a binary mixture of vapors, 105 – Gas separation by means of the Knudsen compressor, 155
Binary mixtures – The temperature-jump problem based on the linearized Boltzmann equation for a binary mixture of rigid spheres, 132 – The viscous-slip, diffusion-slip, and thermal-creep problems for a binary mixture of rigid spheres described by the linearized Boltzmann equation, 749
Boltzmann equation – Half-space problem of the nonlinear Boltzmann equation for weak evaporation and condensation of a binary mixture of vapors, 105 – Gas separation by means of the Knudsen compressor, 155 – On the numerical solution of a BGK-type model for chemical reactions, 455
Bound (locked) waves – Evolution of wide-spectrum unidirectional wave groups in a tank: an experimental and numerical study, 193
Boundary integral methods – Interfacial capillary waves in the presence of electric fields, 404
Boundary layer – The absolute instability of the boundary layer on a rotating cone, 344 – Soil erosion in the

0997-7546/2007 Published by Elsevier Masson SAS.
doi:10.1016/S0997-7546(07)00086-6

boundary layer flow along a slope: a theoretical study, 707
Boundary layers – Numerical studies of the instability and breakdown of a boundary-layer low-speed streak, 64
Boundary with suction – Half-space problem of the nonlinear Boltzmann equation for weak evaporation and condensation of a binary mixture of vapors, 105
Boundary-layer – Series solutions of unsteady three-dimensional MHD flow and heat transfer in the boundary layer over an impulsively stretching plate, 15
Bubble chord time distributions – Bubbly flow structure in hydraulic jump, 367
Bubbly flow structures – Bubbly flow structure in hydraulic jump, 367

C

Capillary effects – Derivation of a new two-dimensional viscous shallow water model with varying topography, bottom friction and capillary effects, 49
Capillary number – Free surface deformation due to a source or a sink in Stokes flow, 720
Cavitation – Investigation of a re-entrant jet reflection at an inclined cavity closure line, 688
Cavity – Numerical simulation of unsteady mixed convection in a driven cavity using an externally excited sliding lid, 669
CFD – Investigation of a re-entrant jet reflection at an inclined cavity closure line, 688
Clustering – Bubbly flow structure in hydraulic jump, 367
Compressible turbulent boundary layers – Scale analysis and experimental observations of shock-induced turbulent boundary layer separation in nozzles, 494
Concentration-driven flow – Gas separation by means of the Knudsen compressor, 155
Condensation – Half-space problem of the nonlinear Boltzmann equation for weak evaporation and condensation of a binary mixture of vapors, 105
Conformal mapping – Free surface deformation due to a source or a sink in Stokes flow, 720
Couette flow – A linearization of Mieussens's discrete velocity model for kinetic equations, 182
Cubic deviation – High velocity flow through fractured and porous media: the role of flow non-periodicity, 295
Curvature – Vorticity and curvature at a stream surface, 473
Cusp – Free surface deformation due to a source or a sink in Stokes flow, 720

D

Discrete velocity model – A linearization of Mieussens's discrete velocity model for kinetic equations, 182
Distributed surface-roughness – Three-dimensional instabilities of laminar flow in a rough channel and the concept of hydraulically smooth wall, 305
DNS – Transitional regimes and rotation effects in Rayleigh–Bénard convection in a slender cylindrical cell, 1

E

Electric generator – Analysis of the flow in a thermo-acoustic MHD generator with conducting walls, 479
Electrohydrodynamics – Interfacial capillary waves in the presence of electric fields, 404
Elliptic – Experimental study of the near field and transition region of a free jet issuing from a sharp-edged elliptic orifice plate, 583
Erosion modelling – Soil erosion in the boundary layer flow along a slope: a theoretical study, 707
Evaporation – A numerical investigation of the steady evaporation of a polyatomic gas, 93 – Half-space problem of the nonlinear Boltzmann equation for weak evaporation and condensation of a binary mixture of vapors, 105

F

Flow control – Manipulation of the reverse-flow region downstream of a fence by spanwise vortices, 236
Flow instabilities – Three-dimensional instabilities of laminar flow in a rough channel and the concept of hydraulically smooth wall, 305
Flow manipulation – Manipulation of the reverse-flow region downstream of a fence by spanwise vortices, 236
Forchheimer – High velocity flow through fractured and porous media: the role of flow non-periodicity, 295
Fracture – High velocity flow through fractured and porous media: the role of flow non-periodicity, 295
Freak waves – Evolution of wide-spectrum unidirectional wave groups in a tank: an experimental and numerical study, 193
Free surface – Free surface deformation due to a source or a sink in Stokes flow, 720
Free-stream turbulence – Optimal disturbances in suction boundary layers, 330
Friction – Derivation of a new two-dimensional viscous shallow water model with varying topography, bottom friction and capillary effects, 49

G

Gas separation – Gas separation by means of the Knudsen compressor, 155
Gravity current – On axisymmetric intrusive gravity currents in a stratified ambient – shallow-water theory and numerical results, 220

H

H theorem – Half-space problem of the nonlinear Boltzmann equation for weak evaporation and condensation of a binary mixture of vapors, 105
Hairpin vortices – Numerical studies of the instability and breakdown of a boundary-layer low-speed streak, 64
Half-space – Half-space problem of the nonlinear Boltzmann equation

for weak evaporation and condensation of a binary mixture of vapors, 105
Hamiltonian formulation of surface gravity waves – On the relation between two numerical methods for the computation of random surface gravity waves, 43
Heat transfer – Transitional regimes and rotation effects in Rayleigh–Bénard convection in a slender cylindrical cell, 1 – Series solutions of unsteady three-dimensional MHD flow and heat transfer in the boundary layer over an impulsively stretching plate, 15
Hele–Shaw flow – Miscible displacements in Hele–Shaw cells: Nonmonotonic viscosity profiles, 444
Hydraulic jumps – Bubbly flow structure in hydraulic jump, 367
Hydraulically smooth wall – Three-dimensional instabilities of laminar flow in a rough channel and the concept of hydraulically smooth wall, 305

I

Inertia – High velocity flow through fractured and porous media: the role of flow non-periodicity, 295
Inertial particles – Particle tracking in Taylor–Couette flow, 738
Instabilities – Thermocapillary flows in a three-layer system with a temperature gradient along the interfaces, 422
Integral time scales – Bubbly flow structure in hydraulic jump, 367
Interfaces – Thermocapillary flows in a three-layer system with a temperature gradient along the interfaces, 422
Interparticle arrival time – Bubbly flow structure in hydraulic jump, 367
Intrusion – On axisymmetric intrusive gravity currents in a stratified ambient – shallow-water theory and numerical results, 220

J

Jet actuator – Manipulation of the reverse-flow region downstream of a fence by spanwise vortices, 236
Jets – Experimental study of the near field and transition region of a free jet issuing from a sharp-edged elliptic orifice plate, 583

K

Kinetic equation – A linearization of Mieussens's discrete velocity model for kinetic equations, 182
Kinetic theory – A numerical investigation of the steady evaporation of a polyatomic gas, 93
Kinetic theory of gases – Half-space problem of the nonlinear Boltzmann equation for weak evaporation and condensation of a binary mixture of vapors, 105 – Gas separation by means of the Knudsen compressor, 155
Knudsen compressor – Gas separation by means of the Knudsen compressor, 155
Knudsen gas – Gas separation by means of the Knudsen compressor, 155

L

Lagrangian approach – Particle trajectory and mass transport of finite-amplitude waves in water of uniform depth, 385
Laminar flow – High velocity flow through fractured and porous media: the role of flow non-periodicity, 295
Linear stability analysis – Miscible displacements in Hele–Shaw cells: Nonmonotonic viscosity profiles, 444
Linearized Boltzmann equation – The viscous-slip, diffusion-slip, and thermal-creep problems for a binary mixture of rigid spheres described by the linearized Boltzmann equation, 749
Liquid bridge – Numerical analysis of the nonlinear vibration of axisymmetric liquid bridges, 284
Liquid sheets – Interfacial capillary waves in the presence of electric fields, 404
Local velocity distributions – Simulation of airflow fields and microparticle deposition in realistic human lung airway models. Part I: Airflow patterns, 632

M

Magneto-hydrodynamics – Analysis of the flow in a thermo-acoustic MHD generator with conducting walls, 479
Magnetohydrodynamics – Spherical Couette flow in a dipolar magnetic field, 729
Mass transport – Particle trajectory and mass transport of finite-amplitude waves in water of uniform depth, 385
Matching inlet Reynolds number – Simulation of airflow fields and microparticle deposition in realistic human lung airway models. Part II: Particle transport and deposition, 650
Maximum wall stress – A comparison between different asymmetric abdominal aortic aneurysm morphologies employing computational fluid–structure interaction analysis, 615
Merging – The merging of two co-rotating vortices: a numerical study, 779
MHD flow – Series solutions of unsteady three-dimensional MHD flow and heat transfer in the boundary layer over an impulsively stretching plate, 15
Miscible displacement – Miscible displacements in Hele–Shaw cells: Nonmonotonic viscosity profiles, 444
Mixed convection – Numerical simulation of unsteady mixed convection in a driven cavity using an externally excited sliding lid, 669
Mixing – Experimental study of the near field and transition region of a free jet issuing from a sharp-edged elliptic orifice plate, 583
Model reduction – Accurate model reduction of transient and forced wakes, 354
Monte Carlo – A numerical investigation of the steady evaporation of a polyatomic gas, 93

N

Navier–Stokes – Accurate model reduction of transient and forced wakes, 354
Near-wall layer – Scaling of the near-wall layer beneath turbulent separated flow, 271
Nonlinear dynamics – Numerical analysis of the nonlinear vibration of axisymmetric liquid bridges, 284
Nonlinear water waves – Evolution of wide-spectrum unidirectional wave groups in a tank: an experimental and numerical study, 193
Nonmonotonic viscosity profile – Miscible displacements in Hele–Shaw cells: Nonmonotonic viscosity profiles, 444
Numerical – Numerical simulation of unsteady mixed convection in a driven cavity using an externally excited sliding lid, 669
Numerics – The merging of two co-rotating vortices: a numerical study, 779

O

One-dimensional models – Numerical analysis of the nonlinear vibration of axisymmetric liquid bridges, 284
Optimal disturbance – Optimal disturbances in suction boundary layers, 330

P

Parabolic and realistic velocity inlet conditions – Simulation of airflow fields and microparticle deposition in realistic human lung airway models. Part I: Airflow patterns, 632
Particle depositions and segmental correlations – Simulation of airflow fields and microparticle deposition in realistic human lung airway models. Part II: Particle transport and deposition, 650
Particle rebound – Large-scale flow structures in particle–wall collision at low Deborah numbers, 511
Particle trajectory – Particle trajectory and mass transport of finite-amplitude waves in water of uniform depth, 385
Periodicity – High velocity flow through fractured and porous media: the role of flow non-periodicity, 295
PIV – Large-scale flow structures in particle–wall collision at low Deborah numbers, 511
PIV-LIV method – Investigation of a re-entrant jet reflection at an inclined cavity closure line, 688
Poiseuille flow – Gas separation by means of the Knudsen compressor, 155
Polyatomic gases – A numerical investigation of the steady evaporation of a polyatomic gas, 93
Porous media – High velocity flow through fractured and porous media: the role of flow non-periodicity, 295
Proper orthogonal decomposition – Accurate model reduction of transient and forced wakes, 354
Pulsatile 3-D blood flow – A comparison between different asymmetric abdominal aortic aneurysm morphologies employing computational fluid–structure interaction analysis, 615

Q

Quadratic law – High velocity flow through fractured and porous media: the role of flow non-periodicity, 295

R

Rarefied gas dynamics – The temperature-jump problem based on the linearized Boltzmann equation for a binary mixture of rigid spheres, 132 – A linearization of Mieussens's discrete velocity model for kinetic equations, 182 – The viscous-slip, diffusion-slip, and thermal-creep problems for a binary mixture of rigid spheres described by the linearized Boltzmann equation, 749
Re-entrant jet reflection – Investigation of a re-entrant jet reflection at an inclined cavity closure line, 688
Reacting mixtures – On the numerical solution of a BGK-type model for chemical reactions, 455
Riemann problem – On the numerical solution of a BGK-type model for chemical reactions, 455
Rigid spheres – The temperature-jump problem based on the linearized Boltzmann equation for a binary mixture of rigid spheres, 132 – The viscous-slip, diffusion-slip, and thermal-creep problems for a binary mixture of rigid spheres described by the linearized Boltzmann equation, 749
Rotating cone – The absolute instability of the boundary layer on a rotating cone, 344
Rotation effects – Transitional regimes and rotation effects in Rayleigh–Bénard convection in a slender cylindrical cell, 1

S

Second-moment closures – Testing of Reynolds-stress-transport closures by comparison with DNS of an idealized adverse-pressure-gradient boundary layer, 551
Self-similar – On axisymmetric intrusive gravity currents in a stratified ambient – shallow-water theory and numerical results, 220
Separated flow – Manipulation of the reverse-flow region downstream of a fence by spanwise vortices, 236
Series solution – Series solutions of unsteady three-dimensional MHD flow and heat transfer in the boundary layer over an impulsively stretching plate, 15
Settling behaviour – Particle tracking in Taylor–Couette flow, 738
Shallow water – On axisymmetric intrusive gravity currents in a stratified ambient – shallow-water theory and numerical results, 220
Shallow water equations – Derivation of a new two-dimensional viscous shallow water model with varying topography, bottom friction and capillary effects, 49
Sharp-edged orifice plate – Experimental study of the near field and transition region of a free jet issuing from a sharp-edged elliptic orifice plate, 583
Shear thinning fluid – Large-scale flow structures in particle–wall collision at low Deborah numbers, 511

Shock waves – A linearization of Mieussens's discrete velocity model for kinetic equations, 182
Shock-induced separation – Scale analysis and experimental observations of shock-induced turbulent boundary layer separation in nozzles, 494
Similarities – The turbulent flow between two rotating stirrers: similarity laws and transitions for the driving torques fluctuations, 258
Sink – Free surface deformation due to a source or a sink in Stokes flow, 720
Sliding lid – Numerical simulation of unsteady mixed convection in a driven cavity using an externally excited sliding lid, 669
Slowly varying solution – Half-space problem of the nonlinear Boltzmann equation for weak evaporation and condensation of a binary mixture of vapors, 105
Source – Free surface deformation due to a source or a sink in Stokes flow, 720
Spatial evolution – Evolution of wide-spectrum unidirectional wave groups in a tank: an experimental and numerical study, 193
Spectral methods – On the relation between two numerical methods for the computation of random surface gravity waves, 43
Spherical Couette flow – Spherical Couette flow in a dipolar magnetic field, 729
Splitting methods – On the numerical solution of a BGK-type model for chemical reactions, 455
Stability – Numerical studies of the instability and breakdown of a boundary-layer low-speed streak, 64
Stokes equations – Miscible displacements in Hele–Shaw cells: Nonmonotonic viscosity profiles, 444
Stokes flow – Free surface deformation due to a source or a sink in Stokes flow, 720
Stokes layer – Viscous streaming from surface waves on the wall of acoustically-driven gas bubbles, 28
Stokes wave – Particle trajectory and mass transport of finite-amplitude waves in water of uniform depth, 385
Strained-channel DNS) – Testing of Reynolds-stress-transport closures by comparison with DNS of an idealized adverse-pressure-gradient boundary layer, 551
Stratified – On axisymmetric intrusive gravity currents in a stratified ambient – shallow-water theory and numerical results, 220
Stream surfaces – Vorticity and curvature at a stream surface, 473
Streaming – Viscous streaming from surface waves on the wall of acoustically-driven gas bubbles, 28
Streamwise streaks – Numerical studies of the instability and breakdown of a boundary-layer low-speed streak, 64 – Optimal disturbances in suction boundary layers, 330
Suction boundary layer – Optimal disturbances in suction boundary layers, 330
Surface tension – Free surface deformation due to a source or a sink in Stokes flow, 720
Surface waves – Viscous streaming from surface waves on the wall of acoustically-driven gas bubbles, 28
Swept leading edge – Investigation of a re-entrant jet reflection at an inclined cavity closure line, 688
Symmetry group – Analysis and development of subgrid turbulence models preserving the symmetry properties of the Navier–Stokes equations, 531

T

Taylor–Couette flow – Particle tracking in Taylor–Couette flow, 738
Temperature-jump coefficient – The temperature-jump problem based on the linearized Boltzmann equation for a binary mixture of rigid spheres, 132
Thermal convection – Transitional regimes and rotation effects in Rayleigh–Bénard convection in a slender cylindrical cell, 1
Thermal creep – The viscous-slip, diffusion-slip, and thermal-creep problems for a binary mixture of rigid spheres described by the linearized Boltzmann equation, 749
Thermal transpiration – Gas separation by means of the Knudsen compressor, 155
Thermo-acoustic – Analysis of the flow in a thermo-acoustic MHD generator with conducting walls, 479
Thermocapillary flows – Thermocapillary flows in a three-layer system with a temperature gradient along the interfaces, 422
Thermodynamics – Analysis and development of subgrid turbulence models preserving the symmetry properties of the Navier–Stokes equations, 531
Transient 3-D airflow simulations – Simulation of airflow fields and microparticle deposition in realistic human lung airway models. Part I: Airflow patterns, 632
Transition to turbulence – Numerical studies of the instability and breakdown of a boundary-layer low-speed streak, 64
Transitional regimes – Transitional regimes and rotation effects in Rayleigh–Bénard convection in a slender cylindrical cell, 1
Transitions – The turbulent flow between two rotating stirrers: similarity laws and transitions for the driving torques fluctuations, 258
Transverse length scales – Bubbly flow structure in hydraulic jump, 367
Travelling waves – Interfacial capillary waves in the presence of electric fields, 404
Turbulence – Experimental study of the near field and transition region of a free jet issuing from a sharp-edged elliptic orifice plate, 583
Turbulence modeling – Analysis and development of subgrid turbulence models preserving the symmetry properties of the Navier–Stokes equations, 531
Turbulence models – Testing of Reynolds-stress-transport closures by comparison with DNS of an idealized adverse-pressure-gradient boundary layer, 551
Turbulent flow – Manipulation of the reverse-flow region downstream of a fence by spanwise vortices, 236

Turbulent separated flow – Scaling of the near-wall layer beneath turbulent separated flow, 271

Turbulent torque fluctuations – The turbulent flow between two rotating stirrers: similarity laws and transitions for the driving torques fluctuations, 258

Turbulent two-phase flow – Soil erosion in the boundary layer flow along a slope: a theoretical study, 707

U

Unsteady – Series solutions of unsteady three-dimensional MHD flow and heat transfer in the boundary layer over an impulsively stretching plate, 15 – Numerical simulation of unsteady mixed convection in a driven cavity using an externally excited sliding lid, 669

V

Vibrations – Numerical analysis of the nonlinear vibration of axisymmetric liquid bridges, 284

Viscoelastic fluid – Large-scale flow structures in particle–wall collision at low Deborah numbers, 511

Viscosity – Derivation of a new two-dimensional viscous shallow water model with varying topography, bottom friction and capillary effects, 49

Viscous slip – The viscous-slip, diffusion-slip, and thermal-creep problems for a binary mixture of rigid spheres described by the linearized Boltzmann equation, 749

Vortex – The merging of two co-rotating vortices: a numerical study, 779

Vorticity – Vorticity and curvature at a stream surface, 473

W

Wall-bounded turbulence – Testing of Reynolds-stress-transport closures by comparison with DNS of an idealized adverse-pressure-gradient boundary layer, 551

Water waves – On the relation between two numerical methods for the computation of random surface gravity waves, 43

Z

Zakharov equation – Evolution of wide-spectrum unidirectional wave groups in a tank: an experimental and numerical study, 193
