

Book review

**Tetrahedron Organic Chemistry Series, Volume 22.
Organic Syntheses Based on Name Reactions**

By A.A. Hassner, C. Stumer, Pergamon, Amsterdam,
2002. 444 pp.; paperback \$45, €45, hard cover \$125,
€125

This is the second edition of Organic Syntheses Based on Name Reactions and Unnamed Reactions previously published as Volume 11 of the series. It reflects the

notion whereby many new reagents and reactions are now being referred to by their names. It includes over 155 new stereoselective and regioselective reagents or reactions including asymmetric syntheses.

Many indexes are provided: A names index with cross references to multiple names. A reagent index, A reaction index, A functional group transformation index which allows one to search for conversions of functional group to another.
