

Synthesis of Alkynyl-Substituted Nitronyl Nitroxides through an Organosilicon Derivative

Eugene Tretyakov,^[a] Galina Romanenko,^[a] Alexei Podoplelov,^[a] and Victor Ovcharenko*^[a]

Keywords: Alkynes / Diazo compounds / Cycloaddition / Nitrogen heterocycles / Radicals

On page 2702 of the original article,^[1] reference [8] contains an error in compound numbering; the correct ref.^[8] is given below.

The Authors

[1] E. Tretyakov, G. Romanenko, A. Podoplelov, V. Ovcharenko, *Eur. J. Org. Chem.* **2006**, 2695–2702.

[8] Oxidation of **7** with PbO₂ occurred with difficulty and did not form **1**. After a mixture of **7** with PbO₂ had been stirred in benzene for one day, the solution had merely acquired a pale yellow color. Subsequently stirring the reaction mixture for a week resulted in the formation of an orange-brown solution, from which no products were isolated.
