

Cyanodeoxy-Glycosyl Derivatives as Substrates for Enzymatic Reactions

Ana T. Carmona,^[a] Pavla Fialová,^[b] Vladimír Křen,^{*,[b]} Rudiger Ettrich,^[c]
 Ludmila Martínková,^[b] Antonio J. Moreno-Vargas,^[a] Cristina González,^[a] and
 Inmaculada Robina^{*,[a]}

Keywords: Sugar nitriles / Azido-tetrazole tautomerism / Glycosidase / Inhibitors / Enzymes / Carbohydrates

In Scheme 3 on page 1879 of the original article,^[1] the configuration of the bis-acetal centers of compounds **24** and **25** should be (*S,S*) instead of (*R,R*); the correct drawings of these formulae are shown below (the atom numbering does not correspond to the IUPAC nomenclature numbering). In addition, the correct name of compound **25** on page 1883 is:

(1*R*,2*R*,4*S*,5*S*,7*R*,8*R*,9*R*)-*N*-(11-Azido-4,5-dimethoxy-4,5-dimethyl-3,6,13-trioxa-10-azatricyclo[7.3.1.0^{2,7}]tridec-10-en-8-yl)acetamide
