

The EUChemSoc Societies have taken the significant step into the future by merging their traditional journals, to form two leading chemistry journals, the *European Journal of Inorganic Chemistry* and the *European Journal of Organic Chemistry*. Three further EUChemSoc Societies (Austria, Czech Republic and Sweden) are Associates of the two journals.

COVER PICTURE

The cover picture shows the photochemically promoted acylation of alcohols under very mild conditions. The experimental protocol is extremely simple, thanks to the use of a benchtop photochemical reactor based on UV LEDs. The acyl transfer proceeds well for primary, secondary and even tertiary alcohols. The choice of a long wavelength (up to 420 nm) allows the presence of otherwise photosensitive groups, which can later be photolyzed at a higher energy. Details are discussed in the article by C. G. Bochet et al. on p. 2073 ff.
