FeX₃-Promoted Intermolecular Addition of Benzylic Alcohols to Aromatic Alkynes: A Mild and Efficient Strategy for the Synthesis of Alkenyl Halides

Kai Ren,^[a] Min Wang,^[a] and Lei Wang^{*,[a,b]}

Keywords: Alkenes / Alkynes / Alcohols / Iron / Synthetic methods / Halides

In the original article,^[1] reference^[18d], which describes analogous chemistry performed in a different solvent, was not included.

The Author apologizes for any inconvenience this may have caused.
