# Aims and Scope

The European Journal of Pharmaceutics and Biopharmaceutics provides a medium for publication of novel and innovative research from areas of pharmaceutical technology, drug delivery systems, controlled release systems, drug targeting, physical pharmacy, biopharmaceutics, pharmacodynamics and pharmacokinetics, drug development, drug and prodrug design, pharmaceutical analysis, drug stability, quality control, GMP, regulatory aspects, pharmaceutical packaging, and phytochemistry.

The pharmaceutical biotechnology section provides a forum for the publication of papers on scientific, developmental, regulatory and manufacturing issues concerning the development of biopharmaceuticals, uniquely combining expert contributions and opinions of authors from the fields of pharmaceutics and biotechnology. This scope encompasses modern biopharmaceuticals (e.g., proteins and nucleic acids), biosimilars/biogenerics as well as 'traditional' products such as antibiotics.

The following types of papers are considered by the Editors: Research Papers, Review Articles and Notes.
