

Corrigendum

Corrigendum to: A second melanotransferrin gene (MTf2) and a novel protein isoform: explanation for the membrane-bound and soluble forms of melanotransferrin? (FEBS 25737)

[*FEBS Letters* 512 (2002) 350–352][☆]

First published online 16 June 2003

The authors want to rectify an error concerning the authenticity of the MTf2 gene reported previously; in the revised 'finished' version of the database, the gene does not exist. For a more detailed description of such potential risks in using genetic databases, see our article 'The double-edged nature of using genetic databases: melanotransferrin genes and transcripts' in the Correspondence section of this issue of FEBS Letters.
