

ERRATUM

The role of free radicals in paraquat-induced corneal lesions

Robert E. Nordquist, Hanh Nguyen, J. Lee Poyer and Raoul Carubelli

Volume 23, Number 1, Pages 66–67

Due to an unfortunate printing error the last line of the captions for figures 7 and 9 were omitted. These should read as follows:

FIGURE 7 Rabbit corneal epithelial-stromal junction 8 days after intrastromal injection (100 μ l) of 75mM paraquat. Note the complete absence of the lamina dense. The arrows indicate lamina dense debris. The bar equals 300 nm.

FIGURE 9 Rabbit corneal epithelial-stromal junction 8 days after intrastromal injection (100 μ l) of 150 mM paraquat. Almost total loss of epithelium and upper stroma can be observed. The arrows indicate an inflammatory infiltrate that accompanied the epithelial loss. The bar equals 4 μ m.
