## Lasers (Abstract)

---

*R.H. Kingston. "Lasers (Abstract)." 1963 PTGMTT National Symposium Program and Digest 63.1 (1963 [MWSYM]): 193-194.*

Recent significant developments in lasers will be discussed. Such new devices as the Raman and semiconductor laser will be described with a brief review of new techniques in the gas and crystalline types of devices. Work in non-linear optical effects will be reviewed with emphasis on the similarity in techniques between microwave and optical theory and experiment.
