Differences Between In-Line and Crossed-Field Three-Port Circuit Models for Interdigital Transducers (Correspondence)

W.R. Smith and H.M. Gerard. "Differences Between In-Line and Crossed-Field Three-Port Circuit Models for Interdigital Transducers (Correspondence)." 1971 Transactions on Microwave Theory and Techniques 19.4 (Apr. 1971 [T-MTT]): 416-417.

Specific comparisons are given which emphasize the similarities and differences between two previously published circuit models for the interdigital surface-wave transducer. It is shown that the choice between the two models depends on the piezoelectric substrate used.
