## NBS Millimeter Wave Power Standards

---

*M.E. Harvey. "NBS Millimeter Wave Power Standards." 1972 G-MTT International Microwave Symposium Digest of Technical Papers 72.1 (1972 [MWSYM]): 22-23.*

The NBS standards for millimeter wave power measurements are calorimeters which are used to determine the effective efficiency of transfer standards (bolometer units). A careful error analysis has been made and the effective efficiency of bolometer units may be determined with uncertainty limits of  $\pm 0.28$  percent.
