Acceleration of Convergence of the Finite-Element Method

E. Della Torre and W. Kinsner. "Acceleration of Convergence of the Finite-Element Method." 1973 G-MTT International Microwave Symposium Digest of Technical Papers 73.1 (1973 [MWSYM]): 56-58.

An extrapolation technique has been found effective in reducing the computation time in solving field problems by the method of finite differences. This technique has been applied to the finite-element method with a corresponding reduction in computation time.
