A Hybrid Integrated L-Band ALC Amplifier

W. Kruppa and R.F. Lee. "A Hybrid Integrated L-Band ALC Amplifier." 1973 G-MTT International Microwave Symposium Digest of Technical Papers 73.1 (1973 [MWSYM]): 306-307.

An ALC amplifier consisting of an rf amplifier, a detector, a variolosser, and an operational amplifier is described. The complete amplifier is realized on an alumina substrate using tantalum RC thin-film technology with appliqued beam-lead devices.
