## President's Message--The Microwave Spectrum, Our Resource for the Future

---

R.A. Rivers. "President's Message--The Microwave Spectrum, Our Resource for the Future." 1974 *Transactions on Microwave Theory and Techniques* 22.12 (Dec. 1974, Part II [T-MTT] (1974 Symposium Issue)): 1123-1123.

Many areas of technical activity are involved with the more effective utilization of scarce resources. New products are continually being introduced to make more efficient use of resources. Many times resources are human time and work. In the case of microwave engineering we use a resource (the electromagnetic spectrum) to acquire or transmit information. We use this resource to make more efficient use of human time and energy. In other cases we use this resource to transmit energy itself.
