A New Edge-Mode Isolator in the Very High Frequency Range (Comments)

R.A. Craig. "A New Edge-Mode Isolator in the Very High Frequency Range (Comments)." 1977 Transactions on Microwave Theory and Techniques 25.1 (Jan. 1977 [T-MTT]): 76-77.

Test data taken on production models of fixed-tuned isolators operating in the 225-400-MHz frequency range are presented for comparison to those given in the referenced paper. Better electrical performance of this isolator as well as a smaller size compared to the edge-mode unit is shown.
