Mechanisms for Coherent Scattering of Electromagnetic Waves from Relativistic Electron Beams

V.L. Granatstein and P. Sprangle. "Mechanisms for Coherent Scattering of Electromagnetic Waves from Relativistic Electron Beams." 1977 Transactions on Microwave Theory and Techniques 25.6 (Jun. 1977 [T-MTT] (Special Issue on the Proceedings of the Second International Conference on Submillimeter Waves and Their Applications)): 545-550.

We review recent studies in which powerful submillimeter radiation has been produced by coherently scattering relatively long wavelength radiation from relativistic electron beams. Various physical mechanisms responsible for the scattering are described and the relationship between them is discussed.
