An Appraisal of Methods for Computation of the Dispersion Characteristics of Open Microstrip

E.F. Kuester and D.C. Chang. "An Appraisal of Methods for Computation of the Dispersion Characteristics of Open Microstrip." 1979 Transactions on Microwave Theory and Techniques 27.7 (Jul. 1979 [T-MTT]): 691-694.

A number of methods in the literature for computing the dispersion characteristics of open microstrip are compared in the case when substrate thickness is comparable to strip width. Significant discrepancies between the various results are found, and several suggestions are made to explain them.
