The Design of Large Scale Terrestrial Rectennas for Low-Cost Production and Erection

W.C. Brown. "The Design of Large Scale Terrestrial Rectennas for Low-Cost Production and Erection." 1978 MTT-S International Microwave Symposium Digest 78.1 (1978 [MWSYM]): 349-351.

Satellite-solar-power requires a very large rectenna for the reception of microwave power on the Earth. A rectenna design for large scale production and for low-cost per unit area is described and experimental results presented.
