Applications of High-Speed Integrated Circuits to Microwave Systems (Panel Discussion)

P.T. Greiling. "Applications of High-Speed Integrated Circuits to Microwave Systems (Panel Discussion)." 1978 MTT-S International Microwave Symposium Digest 78.1 (1978 [MWSYM]): 483-483.

This panel will present the current status of both silicon and gallium arsenide high-speed integrated circuits and discuss their impact on future microwave systems. A comparison of the more mature silicon and the emerging gallium arsenide integrated circuit technologies will be presented with emphasis on speed, power and system performance.
