Characteristics of Crossed Rectangular Coaxial Structures

L. Gruner. "Characteristics of Crossed Rectangular Coaxial Structures." 1980 Transactions on Microwave Theory and Techniques 28.6 (Jun. 1980 [T-MTT]): 622-627.

The cutoff frequencies of a rectangular coaxial structure with corner ridges have been determined using the method of partial regions. The theory is complemented by a detailed study of the numerical procedure used in arriving at the results presented.
