## An Admirable Microwave Engineer

---

*K. Tomiyasu. "An Admirable Microwave Engineer." 1989 MTT-S International Microwave Symposium Digest 89.2 (1989 Vol. II [MWSYM]): 743-748.*

In 1944 while taking a course on electromagnetics taught by Professor Ronald W. P. King at Harvard University, I barely noticed a quiet, unassuming, serious student. Later, I learned that his name was Seymour B. Cohn, a part-time student who was employed at the Radio Research Laboratory (RRL) in Cambridge, MA under the directorship of Dr. Frederick E. Terman. In 1948 Seymour received the PhD degree from Harvard and his dissertation dealt with ridge waveguide. This topic was important to RRL because of its application to wideband countermeasures.
