Ka-Band Monolithic GaAs FET Power Amplifier Modules (1988 [MCS])

N. Camilleri, B. Kim, H.Q. Tserng and H.D. Shih. "Ka-Band Monolithic GaAs FET Power Amplifier Modules (1988 [MCS])." 1988 Microwave and Millimeter-Wave Monolithic Circuits Symposium Digest 88.1 (1988 [MCS]): 129-132.

Monolithic GaAs FET power amplifiers consisting of several power combined devices have been fabricated and evaluated. The baseline monolithic chip design consists of a single stage 400 μm FET amplifier and a six-way travelling-wave power divider/combiner with a single stage amplifier in each of the six arms. Several chip combinations were used to make a 1 W amplifier with 5 dB gain and a 0.55 W amplifier with 27 dB gain at 34 GHz.
