## **MTT-S Honors MYJ (Dec. 1994, Part II [T-MTT])**

---

*J.B. Horton. "MTT-S Honors MYJ (Dec. 1994, Part II [T-MTT])." 1994 Transactions on Microwave Theory and Techniques 42.12 (Dec. 1994, Part II [T-MTT] (1994 Symposium Issue)): 2364-2364.*

ON May 24, 1994, during Microwave Week in San Diego, CA, the Microwave Theory and Techniques Society honored the now classic book, *Microwave Filters, Impedance-Matching Networks, and Coupling Structures*, by George L. Matthaei, Leo Young, and Edward M. T. Jones, as an outstanding contribution to the Society and the microwave field. A special Honorary Session was held on Tuesday afternoon, May 24, to recognize and honor the authors and major contributors who conceived, wrote, and published the book. The idea of the book originated with Nat Lipetz, at the time employed by the U.S. Army Research Laboratories at Fort Monmouth, NJ. The project was started at Stanford Research Laboratory (SRI) under the leadership of Seymour Cohn, and was later taken over by George Matthaei. The staff of SRI completed the book under George's direction, and the book was published in 1964, with G. L. Matthaei, L. Young, and E. M. T. Jones as principal authors. Special recognition is given in the Foreword to Nat Lipetz and the Army Research Laboratory for initiating and sponsoring the project that resulted in the book, and to Seymour Cohn for starting the project and contributing many of the papers that were the basis for the book.
