*A.H. Baree, I.D. Robertson and J.S. Bharj. "MMIC SSB Frequency Translators with Image-Rejection for Satellite Transponder Applications (1995 Vol. II [MWSYM])." 1995 MTT-S International Microwave Symposium Digest 95.2 (1995 Vol. II [MWSYM]): 869-872.*

A highly integrated design for advanced monolithic single side-band frequency translators are presented in this paper. Two monolithic chips have been realised which exhibit between 18-45dB of upper side-band rejection over C, X, and Ku-band. The chips are designed for small band-to-band frequency translations (such as uplink to downlink) in satellite communications transponders. Since the chips exhibit a wide-band response, image-rejection is also obtained for both chips.
