The Evolution of Radar Technology Into Commercial Systems

B.S. Hewitt. "The Evolution of Radar Technology Into Commercial Systems." 1994 MTT-S International Microwave Symposium Digest 94.2 (1994 Vol. II [MWSYM]): 1271-1274.

MMIC power amplifiers are a significant performance and cost driver in modern radar systems. Volume production is the key to controlling the processes and achieving repeatable high performance with high yield. Military systems alone cannot provide this volume. Westinghouse, therefore, as a world leader in radar systems, has pursued commercial applications of power MMICs to generate the necessary volume.
