## Dual-Use Technology and the National Airspace System

---

*R.J. Bowles and J. Goodson. "Dual-Use Technology and the National Airspace System." 1994 MTT-S International Microwave Symposium Digest 94.3 (1994 Vol. III [MWSYM]): 1327-1330.*

One objective of the dual-use technology concept is to extract more value from Department of Defense research and development spending. Defense's National Airspace System program is acquiring commercial off-the-shelf and non developmental item equipment to satisfy the armed services' air traffic control system modernization needs. The acquisition strategy co-opts elements of both classical DoD weapon system acquisition and proven commercial acquisition approaches.
