Black Box Modelling of Hard Nonlinear Behavior in the Frequency Domain

J. Verspecht, D. Schreurs, A. Barel and B. Nauwelaers. "Black Box Modelling of Hard Nonlinear Behavior in the Frequency Domain." 1996 MTT-S International Microwave Symposium Digest 96.3 (1996 Vol. III [MWSYM]): 1735-1738.

A black box model is proposed to describe nonlinear devices in the frequency domain. The approach is based upon the use of describing functions and allows a better description of hard nonlinearities than an approach based upon the Volterra theory. Simulations and experiments are described illustrating the mathematical theory.
