Microwave and mm-Wave Engineering Challenges in Pan-European Communications Research

J.G. Gardiner. "Microwave and mm-Wave Engineering Challenges in Pan-European Communications Research." 1996 MTT-S International Microwave Symposium Digest 96.2 (1996 Vol. II [MWSYM]): 483-486.

The pan-European research programmed under the 3rd and 4th Frameworks have identified, and are now researching radio-based personal communications systems operating at frequencies from UHF to 60GHz. The performance targets for these systems are set out by reference to particular projects recently launched and also those proposed for projects offered under the 2nd call for the current programme.
