Comments on "Upper cutoff frequency of the bound wave and new leaky wave on the slotline" [and reply]

M. Idemen, A. Buyukaksoy, J. Zehentner, J. Machac and M. Migliozi. "Comments on "Upper cutoff frequency of the bound wave and new leaky wave on the slotline" [and reply]." 1999 Transactions on Microwave Theory and Techniques 47.5 (May 1999 [T-MTT]): 660-661.

For original paper see J. Zehentner et al., *ibid.*, vol.46, pp.378-86 (Apr. 1998). In the above paper, Zehentner et al. claimed the identification of a new previously unidentified leaky wave on the slotline. They also believe that their conclusions generally hold for other printed-circuit lines. Since their claim seems to be extremely important, we would like to share our considerations with them, as with other colleagues. A reply by Zehentner et al. is included.
