An extension of the MRTD technique to the fast computation of the radiation from planar open structures

G. Carat, R. Gillard, J. Citerne and J. Wiat. "An extension of the MRTD technique to the fast computation of the radiation from planar open structures." 2000 MTT-S International Microwave Symposium Digest 00.1 (2000 Vol. 1 [MWSYM]): 247-249.

A new wavelet-based technique to calculate radiating patterns using the MRTD method is presented. This technique has been applied to the study of a microstrip patch structure. Results show a substantial gain both in memory storage and in CPU time while maintaining the same accuracy as the classical computation.
