Transmission line filters with advanced filtering characteristics

Jia-Sheng Hong and M.J. Lancaster. "Transmission line filters with advanced filtering characteristics." 2000 MTT-S International Microwave Symposium Digest 00.1 (2000 Vol. I [MWSYM]): 319-322.

This paper presents a recent investigation of a generalized configuration of the transmission line filter for realization of different advanced filtering characteristics that are demanded for wireless and mobile communication systems. We have demonstrated, theoretically and experimentally, several microstrip filters of this type.
