A new methodology for the computation of the substrate parasitics of octagonal inductors (2002 Vol. I [MWSYM])

W. Tatinian, P. Pannier and R. Gillon. "A new methodology for the computation of the substrate parasitics of octagonal inductors (2002 Vol. I [MWSYM])." 2002 MTT-S International Microwave Symposium Digest 02.1 (2002 Vol. I [MWSYM]): 165-169 vol. 1.

The paper provides a method for the computation of the substrate parasitics of symmetrical octagonal inductor., using a set of equivalent structures. This method has been tested on a wide range of inductors and the error due to computation is lower than the one due to the topology of the model itself.
