

## Microwave reflection tomography array for damage detection in concrete structures

---

*Yoo Jin Kim, L. Jofre, F. De Flaviis and M.Q. Feng. "Microwave reflection tomography array for damage detection in concrete structures." 2002 MTT-S International Microwave Symposium Digest 02.2 (2002 Vol. II [MWSYM]): 651-654 vol.2.*

Microwave sub-surface imaging system for structural damage detection using reflection array is developed. The analytical expressions of bi-focusing procedures are derived and applied to a series of numerical simulations. Slot antenna array is designed and fabricated for experimental study. From the results of measurements, it is demonstrated that the proposed imaging system can reconstruct sub-surface images efficiently.
