A new sandwich structure of photonic bandgap

Yunbo Pang and Baoxin Gao. "A new sandwich structure of photonic bandgap." 2002 MTT-S International Microwave Symposium Digest 02.2 (2002 Vol. II [MWSYM]): 1157-1160 vol.2.

We propose a photonic bandgap (PBG) sandwich structure in which a periodic pattern of square metal pads is printed in the middle of the substrate. Neither drilling nor suspending the substrate is required, and the integrity of the ground plane is also kept. Several circuits with different locations of the periodic lattice are compared, and potential applications are demonstrated.
