Status of InP HEMT Technology for Microwave Receiver Applications (Invited)

P.M. Smith. "Status of InP HEMT Technology for Microwave Receiver Applications (Invited)." 1996 Microwave and Millimeter-Wave Monolithic Circuits Symposium Digest 98. (1996 [MCS]): 129-132.

The current status of InP-based high electron mobility transistor (HEMT) technology for low noise amplification at frequencies up to more than 100 GHz is presented. Following a review of recent advances industry-wide in both device and circuit performance, two issues which will pace the rate at which this new technology can be inserted into microwave systems--material/process maturity and long-term reliability--are discussed.
