Low cost microwave receiver protectors/AGC's using surface mount components

D. Strack and F. Harris. "Low cost microwave receiver protectors/AGC's using surface mount components." 1997 MTT-S International Microwave Symposium Digest 2. (1997 Vol. II [MWSYM]): 531-534.

As the frequency of commercial systems continues to increase, cost solutions to various microwave functions are needed. A low cost solution to receiver protection and receiver AGC functions is presented. This low cost approach is based on use of surface mount techniques for all components in the assembly.
